Project Learning:-

1. Designed an interactive e-commerce dashboard with KPI cards, trend analysis, segmentation visuals, and profitability reports for business decision-making.
2. Created calculated measures such as Total Sales, Total Profit, Profit Margin, and customer/region performance metrics using DAX for actionable insights.
3. Analyzed customer segments, regional performance, discount impact, and product profitability to identify growth opportunities and support strategic decisions.

Key Insight :-

1. A ~33% profit margin is healthy for e-commerce, indicating effective pricing, cost control, or a favorable product mix.
2. More than half of revenue comes from the Consumer segment, making it the most critical customer base. Increase personalized promotions and loyalty campaigns for consumer customers.
3. The most profitable segment aligns with the highest revenue segment, confirming strong customer-market fit.
4. Europe slightly outperforms North America, making it the strongest regional market.
5. Technology products generate strong margins and should be prioritized.
6. Q4 demand is strongest, likely due to festive promotions, seasonal shopping, or campaign effectiveness.
7. This category appears low-margin and may require pricing review.
8. Use targeted discounts instead of blanket promotions.
9. Furniture demand is strongest in developed regions.
10. Revenue appears concentrated in a few high-performing products.
